

Hello I am writing in regard to the NAB wanting to eliminate some of XM satellite radio programming. This is absurd. I listen to XM instant traffice and weather on more than one occassion a day. It is simply the best traffic and weather information you can get. Instead of trying to eliminate this maybe the competition should decide how they can provide better service. I have a problem with people trying to shut something down just because it is better than what they have to offer. I pay for my XM satellite and I enjoy its programming, if nothing is wrong with it, stop trying to fix it. So I urge you to reject the NAB's petition 04-160. Thank you for your time
